**CAREER
CONFUSION**

Difficulty choosing a career that matches their abilities and interests.

**LACK OF
PERSONALIZED
GUIDANCE**

Generic advice doesn't consider each student's unique profile.

**SCATTERED
OPPORTUNITIES**

Universities, programs, and scholarships are spread across different platforms.

**UNCLEAR
NEXT STEPS**

Students often don't know what skills, education, or path they need to reach their career goal.

Who does it Affect?

1. May choose the wrong degree due to limited guidance.
2. Can lose time and motivation after realizing the degree isn't right for them.
3. May switch degrees, drop out, or continue without a clear career goal.

1. Spend significant money on education without knowing whether the chosen path is suitable.
2. Changing degrees or dropping out can create additional financial pressure.

1. Wrong career choices can lead to wasted skills, education, and potential.
2. Students may enter careers that don't match their interests or abilities.

The right career starts with the right direction.

Personalized guidance for Pakistani students — matched to your marks and interests, or browse universities and scholarships on your own.

Our Solution

Meet NextStep AI:

NextStep AI is more than a career recommendation tool — it provides students with complete guidance to make the right decisions and confidently plan their future.”

Key Modules

Career Assessment

Analyzes students' academic background, interests, skills, and preferences.

Career Recommendations

Suggests suitable career fields based on each student's unique profile.

Universities & Scholarships

Helps students discover relevant universities, programs, and scholarship opportunities.

AI Career Counselor

Provides personalized answers, guidance, and support for career-related questions.

Personalized Career Direction

Helps students understand their options and take the right next steps toward their goals.

 **Complete academic profile**

Add level, background and marks for better matches.

Review

How the Student Journey Works

- Create an academic profile
- Complete the questionnaire
- Receive ranked career matches
- Explore fields and roadmaps
- Calculate aggregate
- Compare universities
- Find scholarships
- Ask the AI counselor

Recommendation Technology

1. **Explainable weighted recommendation engine**
2. **Subject performance: 40%**
3. **Interests: 35%**
4. **Education and stream fit: 15%**
5. **Market and future potential: 10%**
6. **Honest mismatch penalties and reasons**

Innovation

- **Complete guidance ecosystem—not just a career quiz**
- **Pakistan-specific education pathways**
- **Explainable recommendations**
- **Personalized five-step roadmaps**
- **Career, university, aggregate and scholarship integration**
- **AI counselor with student context**

What We Have Actually Built:

1. User registration, login and profile management
2. Academic marks and questionnaire
3. 37 detailed career fields
4. Personalized recommendations and roadmaps
5. 29 universities with expanded degree information
6. 9 government scholarship schemes
7. Aggregate calculator
8. AI counselor
9. Admin panel and documented APIs

Future Improvements

1. Validate recommendations with students and counselors
2. Add location, budget and career-priority inputs
3. Use current official admission and market data
4. Save aggregate history and roadmap progress
5. School/counselor dashboard
6. Add mock tests for entrytest prep.
7. Train AI model on large datasets for better recommendations and for user guide .
8. Add real time data of universities .
9. Add more universities and more opportunities .
10. Mobile application

Technology Behind the Project:

- | | |
|---------------------------------|-------------------------------|
| 1 Django REST Framework backend | 2 PostgreSQL / SQLite support |
| 3 Vanilla JavaScript frontend | 4 HTML5 & CSS3 |
| 5 JWT authentication | 6 Gemini-powered AI counselor |
| 7 Gemini-powered AI counselor | 8 Swagger API documentation |

Project Feasibility

- A functional full-stack MVP has already been developed.
- Uses affordable, open-source technologies.
- Can be deployed on free or low-cost cloud services.
- The database can easily support more careers, universities, and scholarships.
- REST API architecture enables future web and mobile expansion.
- Core features work independently if the AI service is unavailable.
- Django Admin makes data management simple.
- The platform is practical, scalable, and easy for students to access.

“

Thank You.
